

Description

GGU-AXPILE - calculation of drilled and driven piles

The program allows the calculation of drilled piles and driven piles and graphical presentation of the results. Tension piles can also be calculated.

Dependent upon soil characteristics, the permissible pile load can be calculated with varying values for pile length, pile diameter, or pile cross-section. The permissible pile load is presented as a function of length or diameter, according to choice. As data input is in accordance with Windows conventions it can be learnt almost without the use of a handbook. The graphic output supports the true-type fonts provided by Windows, so that you can be sure of an excellent layout. Colour output is supported.
